

JAWAD ALARMAN

AI Engineer - Python, FastAPI, LLM Pipelines

Amman, Jordan | jawad.arman.official@gmail.com | [linkedin.com/in/jawadalarman](https://www.linkedin.com/in/jawadalarman) | [jawad-alarman.onrender.com](https://www.jawad-alarman.onrender.com)

SUMMARY

AI & Data Science undergraduate who builds AI products end to end - the model and prompt layer, and the systems that carry them in production. Background spans an AI planning pipeline built on Gemini, a fraud-detection model that dealt directly with class imbalance, and a solo-built environmental data platform that won 1st place at JoHackathon 2025.

EXPERIENCE

Web Development Intern

Oct 2025 – Present

Afaq Dialogue for Youth Capacity Development (آفاق الحوار لتنمية القدرات الشبابية) - Amman, Jordan

IT Trainee - Industry Placement

Jun 2026

Joswe Medical - Amman, Jordan

- One-month industry placement completed as part of secondary qualification
- Worked on data visualization, cybersecurity, and corporate security, including role and access management

PROJECTS

Astrozen - "Vibe Planning" Platform

- Built an AI planning tool that turns a raw product idea into documentation (PRD, backend schema, and more) plus an architecture blueprint, from which issues and tickets can be generated
- Designed the generation pipeline over Gemini, along with the data model, scheduling, and auth underneath it
- Aimed at "vibe coders" and others without formal planning skills

EcoLens

1st Place, JoHackathon 2025

- Earth-health observatory aggregating seven live environmental data sources into a 3D globe and 2D map
- Sole developer - built everything from the async API aggregation and caching layer through the front end
- 2nd place the year before, at JoHackathon 2024

Fraud Detection Model

- Logistic regression model for fraud detection; the core challenges were class imbalance and choosing an evaluation metric that stayed meaningful once the classes were that skewed
- Write-up and code published publicly

EDUCATION

BSc in AI and Data Science

Oct 2026 – Aug 2030 (Expected)

Al-Hussein Technical University (HTU) - Amman, Jordan

Pearson BTEC International Level 3 Diploma in Information Technology

- Key units: Artificial Intelligence, Programming, Cybersecurity, Information Systems, Advanced Application & Web Development - each completed with a written report and a working project

Pearson BTEC International Level 2 Diploma in Information Technology

- Key units: Programming, Application Development, Web Development, Data Modeling - each completed with a written report and a working project

SKILLS

Languages & Frameworks: Python, TypeScript, FastAPI, Next.js, React Native

Data & ML: pandas, scikit-learn, LLM orchestration, PostgreSQL, Redis, Celery

Practices: Async & typed Python, pytest, AI Engineering, Data Visualization

HONORS

1st Place, JoHackathon 2025 · 2nd Place, JoHackathon 2024 · Create Apps Championship
